YIKES! Water Pressure Booster Systems

Testimonials

Here is what others have to say about *Yikes!* Booster pump systems:

Date: 06/19/2000

From: Mark Veilleux

Thanks guys for another great product. Your system works fantastic. It was a simple operation to boost pressure and volume for a system that had no pressure at the street to speak of. The home sat 2600' off the road, I ran a 1 1/2" feed and was 23' higher than the street. We had 40 lb. at the street and about 9 gpm. With the Yikes, the water pressure was boosted to 60lbs and 12gpm! I was amazed! So was the customer.

Thank you for your service!

Several months ago I ordered a TW 240-150 booster system from you and I had it installed about 3 weeks ago. My customer is very, very pleased with the result. From now on I will recommend your product to everyone I build a house for. I also plan to contact all of my customers and tell them about it and offer to install one for them.

Thank you for all your help and for a great product.

By trade, I am electrician. My company (CEG Electrical Services Inc.) employs 18 electricians doing commercial work in the Kansas City area. 12 years ago a friend of mine had a house built and had all kinds of problems. 2 years later he decided to build another house and asked me to help him build it. I have many contacts in many trades and decided to put them to work. Along the way during that job I decided that there was a market for a construction management company building high end, high quality homes and that is how I (and an architect and an engineer) got into the home building business. We build an average of 14 a year (all tend to be over \$850,000) and, as of today, have a backlog of 22. CEG Construction Services Inc. employees 9 full time people. We put a full time superintendent on every job and oversee every days work. Our job is to insure that the highest quality work is done by every contractor. In the 10 years we have been in this business we have built 133 homes (six are under construction at this moment) and we have never been named in any kind of lawsuit. Most of our business is referral and we have never advertised.

As for the house in question, it is a 5,000 sq.ft. ranch built on 80 acres about 25 miles east of Kansas City, Mo. in Orrick, Mo. The Lawyer owner wanted a high quality home and waited almost 3 years until we had time for his house on our schedule. (what loyalty!) We started construction in May 2000. By August we knew we had a problem with water pressure. The house is connected to a rural water system and is over 900 feet from the 2" main. There is a 105 foot rise from the main to the house. Our plumber ran 1 1/2 pipe to the house and the result was a static pressure of 28 psi and a residual pressure of less than 20 psi. Not too great for the shower. A friend of mine who lives in Newtown, Penna had seen one of your pump systems and suggested I search the web for your product. Glad I did. Our reputation as problem solvers is still intact. Our plumber installed your pump (and I agree, He does great work) and our customer is a happy guy (and his wife is even happier)

As for the filtration system, our local co-op electric company sells us water heaters, osmosis filtration systems and water softeners. In the picture the softener is immediately to the right of the Yikes! system and the osmosis system is to the right of that. The osmosis system only feeds a special faucet on the kitchen sink and 2 icemakers.

Out of curiosity, I asked my plumber to check at the counter of the 2 plumbing supply houses he uses the most for a pressure building system and none were aware of your product nor one like it. This low-pressure problem is common in rural water districts. I'm surprised that more people are not aware of products such as yours.

I will be attending the May home builders assn. meeting and intend to enlighten the membership about how your quality product made my quality home a better place to live. I hope I have answered all your questions. I enjoyed your letter as much as your product.

I hope you find that there is a big market for your quality product. Please feel free to contact me if I may assist you in any way.
